Notes:

- **[X/10]** relates to perceived exertion. For those with power metres, you should be able to match these values up with power ranges.
- Much of this work can be done on a trainer or outdoors.
- On a given week, if you're stretched for time, you can either skip your recovery ride(s) or fit in your interval/intensity efforts within your recovery rides.
- For interval/intensity efforts, it's best to perform these rides on uninterrupted routes – either flat or rolling terrain.
